

Thank you for coming to Bilby 3D's Sydney Launch Party!

[View this email in your browser](#)

A big thanks for coming!

To show our appreciation, assembled Printrbot and Roland machines will be 10% off!

10% off assembled Printrbot and Roland machines!

until this Friday, 23rd January 2015.

Don't miss out!

For those who couldn't come, here's what went down...

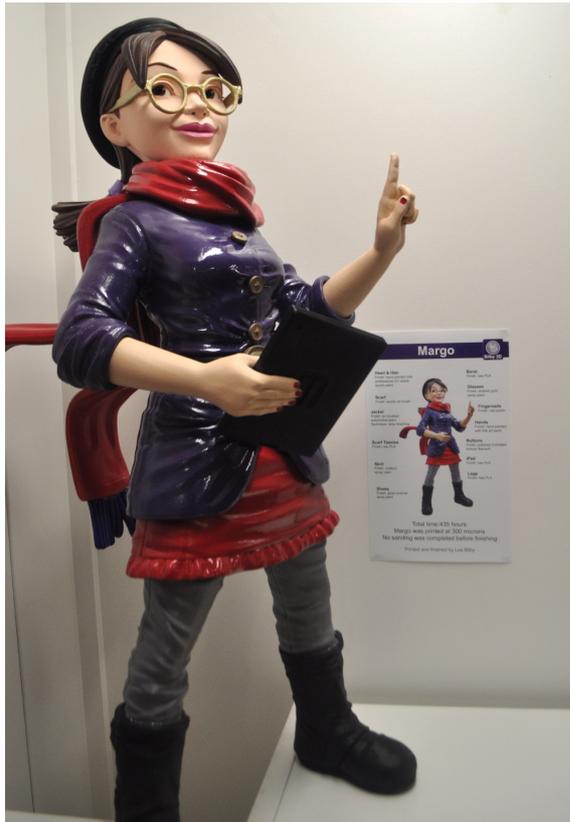

Guests were the first in the world to see Printrbot's two new machines! Air freighted in specially for the event, the **Printrbot Metal Plus** has an impressive quality to price ratio and the **Printrbot Simple Metal Heated Bed Edition** gives you the freedom to print ABS filament in addition to PLA!

These printers are available for preorder now, and will be delivered in 3 weeks.

Roland displayed its **MonoFab series**,

featuring an improved resin 3D printer and desktop milling machine. The **MonoFab Arm-10** 3D printer heralds a dramatic improvement in resin printing quality and efficiency. The **MonoFab SRM-20** is a compact desktop CNC mill that produces clean and precise contours at twice the speed of previous MDX-15/20 models.

Margo was printed and assembled piece by piece by Lee Bilby, taking a total of 435 hours. This print shows off the possibilities of finishing techniques on raw PLA and bronze filament.

Designed by Bold Machines.

Guests got to take home new filaments to play with including heat change, UV light change and nylon. A guide to our range of 3D printers was also included, as well as 3D prints of T-Rex skulls, the Sydney Opera House, jet engine fans and Veronoi hands. A lucky few picked up a glow in the dark piece!
