Pty. Ltd.

Join one of our new courses and training workshops

Get off to a head start in the New Financial Year with one of our 3D printing, modelling and finishing courses! From the 1st of July 2015 onward, we are expecting to run a series of new and popular courses. [Contact us here](#) to secure your spot.

NEW COURSES

Makerbot Replicator 5 Training

Minimum of 10 participants

This course will cover basic maintenance and advanced user techniques slicing processes and customer profiles. A must do course for any owner wanting to get more out of their Replicator 5s.

Suitable for: all Replicator 5 owners

Cost: \$120/pp or \$500 for 5 persons

[Express Your Interest](#)

Finishing Techniques Workshop

Minimum of 10 participants

In this intensive two hour course, you will learn post-

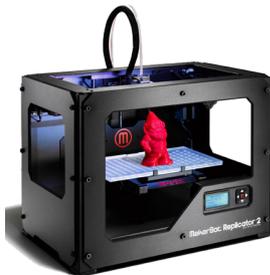

processing techniques to enhance the look of your prints. Often the raw print is not enough to convey the full intent of the design or prototype so Lee Bilby will take you through techniques such as gold leaf coating, varnishes, glue joining and airbrushing.

Suitable for: anyone wanting to take the next step in refining professional quality prints.

Cost: \$120/pp

POPULAR COURSES

Makerbot Replicator 2/2X Advanced Training

Minimum of 10 participants

This course is specifically designed to provide the participant technical training and skills required to tune and service a Makerbot Replicator 2/2X. This includes troubleshooting training as well as the skills required to fine tune the machine for optimal performance. It is exclusively for people with extensive experience with their Makerbot Replicator 2/2X 3D Printer and who are looking to get more out of their machine.

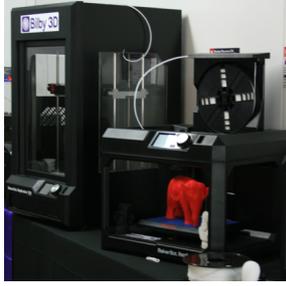

Suitable for: all owners of Replicator 2 and 2xs, particularly universities and organisations looking to produce professional quality results.

Cost: \$200/pp (includes Take Home Service Pack) or \$285 for two people

Introduction to 3D Printing Information Session: Hype vs. Reality

Minimum of 10 participants

In this "warts and all" introduction to 3D printing you will explore this evolving technology from an industry and educational perspective and gain 3D printing literacy to help you decide whether 3D printing is for you. Machines from across the range will be examined in terms of ease of use, adoption, total cost of ownership and their capabilities. 3D printing capabilities will be discussed using examples of successes and failures.

Suitable for: anyone thinking of investing in a prosumer to professional 3D printer for use within a professional and educational setting.

Cost: \$90 (includes a \$50 machine discount voucher)

FreeCAD Drawing

Minimum of 10 participants

Mechanical designer and experienced CAD professional Chris Bilby will show you the basic functions of the FREE parametric modeler, FreeCAD. This software has improved markedly throughout the years and is now highly useful for designing everyday functions. Because of its parametric nature, FreeCAD allows you to easily design from primitive shapes with mathematical precision. This course will teach you to how to manipulate basic and advanced shapes and prepare models for 3D printing.

Suitable for: anyone wanting to design their own 3D models.

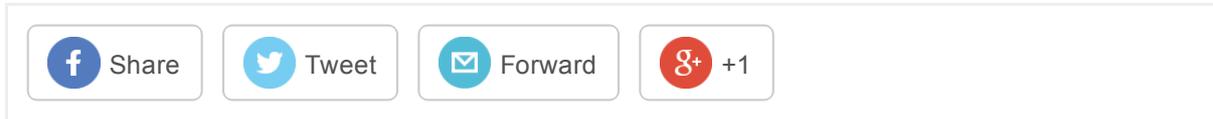

Cost: FREE or \$15 for additional course materials.
